

Last week we announced that we will discontinue PTFE (PFAS) based products by the end of 2025.

We're ready with proven replacements to help you reformulate without compromising performance.

[Read the full press release here](#)

Over the past several years, we have developed a portfolio of PTFE-free replacement products based on our unique nanocomposite technology. These additives perform as well or even better than their PTFE-containing counterparts, oftentimes at a lower cost. Many customers have already successfully transitioned to these products across a multitude of industries including can and container coatings, graphic arts, and architectural coatings.

All PTFE-based product pages on micropowders.com now offer alternative product suggestions in the Typical Properties section.

Below are a few of our highly demanded PTFE replacements. Click on a product for more information and to request testing samples.

MP-28AL
Synthetic Wax/Aluminum Oxide

Maximum scratch and scuff resistance
Value engineered, biodegradable

PolyTuf® 1229
LDPE/Ceramic

Minimal slip, maximum durability
Abrasion and scratch resistance

Superslip 6515AL-EZ
HDPE/EBS/
Aluminum Oxide

Multi-functional PTFE replacement
Scratch protection, anti-block, slip
Surface treated for easy dispersion

PolyGlide 1226XF
HDPE/Ceramic

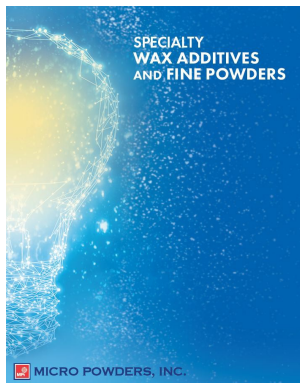

Excellent abrasion resistance and lubricity
Ideal for can and container coatings

PTFE Alternative Additives Brochure

With multinational approvals and global food contact compliance since 2019, these proven powders and dispersions provide formulators with an arsenal of multi-functional ingredients that meet the industry's highest coating performance standards.
